

Main Project Components

1.ESP8266 (Brain=controlling car)

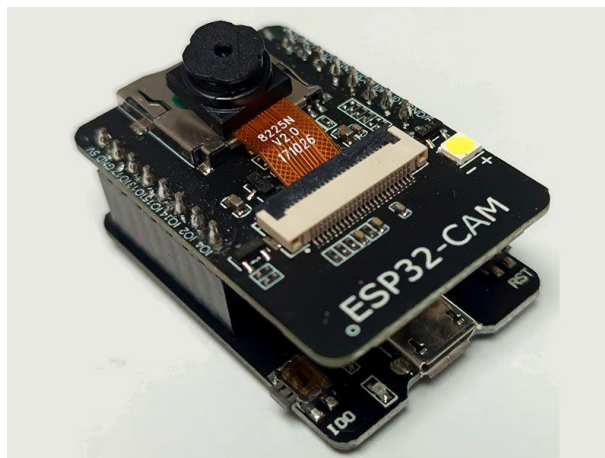

- Motor control
- Basic navigation
- Possibly WiFi command receive

2.ESP32s (Sensor=detection+decision)

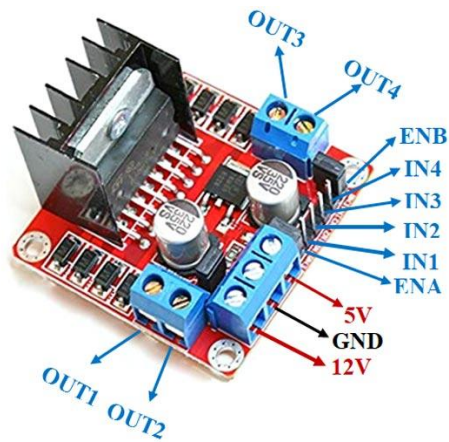

- Flame sensor
- Gas sensor
- Relay control
- High-level decision (fire detected → stop → pump ON)

3.ESP32-CAM(Live Streaming)

- Live video streaming
- Remote monitoring
- (optional) fire detection via image

4. Motor Driver(L298N)

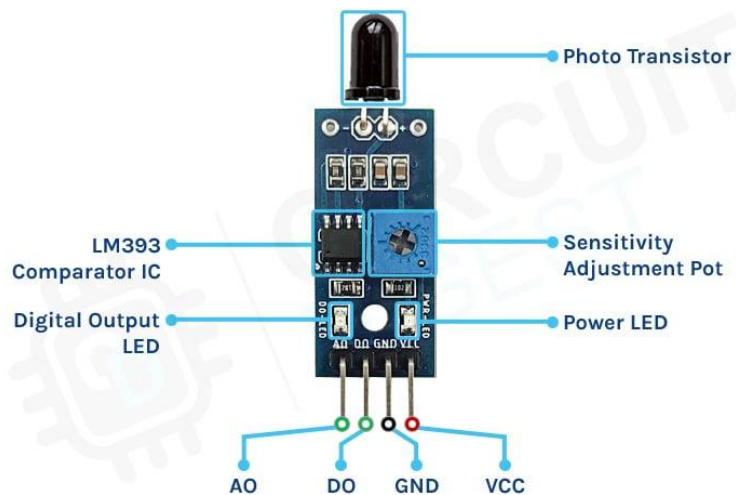

- 👉 Low-power signal (ESP8266) → high-current motor drive
- 👉 Direction + speed control (ENA/ENB PWM, IN1–IN4)

5. Car Chassis + 4 DC Motors + Wheels

6. Sensors

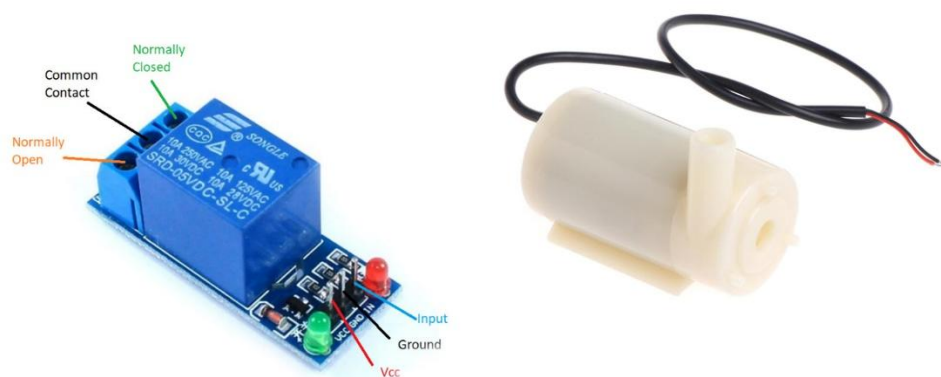

- Flame Sensor

- **MQ2-Gas sensor**

7. Relay Module and Water Pump

Relaymodule: takes time to trigger pump/ pump on or off

Pump: it pumps water

8.Power System

9.Wire
